Computerized Touch Screen Universal Testing Machine

Model: UTE-TS

- Micro Controller Based Panel, Front Panel Touch Screen Display
- Loading accuracy as high as ± 1%
- Motor driven threaded columns for quick & effortless adjustment of lower cross-head to facilitate rapid fixing of test specimen
- Best in Class Analysis Software
Features:
- Loading accuracy as high as ± 1%
- Straining at variable speeds to suit a wide range of materials.
- Windows based touch screen control panel with printing connectivity.
- Motor driven threaded columns for quick effortless adjustment of lower cross-head to facilitate rapid fixing of test specimen.
- Wide range of standard and special accessories.
- Simple controls for ease of operation.
- Robust straining frame of an extremely rigid construction.
- Safe operation ensured by means of safety devices.
- Fully enclosed and protected pressure transducer.
- Load Capacity: 100 kN, 200 kN, 400 kN, 600 kN, 1000 kN, 1200 kN, 1500 kN and 2000 kN.

Application:
'FIE' Electronic Universal Testing Machine is designed for testing materials and other materials under tension, compression bending, transverse and shear loads. Hardness test on metals can also be conducted.

Machine Consists of -
Straining unit:
This consists of a cylinder motor with chain and sprocket drive and a table coupled with the ram of the hydraulic cylinder, mounted on to a robust base. The cylinder and the ram are individually lapped to eliminate friction. The upper cross-head is rigidly fixed to the table by two strengthened columns.

The lower cross-head is connected to two screwed columns which are driven by a motor. Axial loading of the ram is ensured by relieving the cylinder and ram of any possible side loading by the provision of ball seating.

A rotary encoder of minimum resolution of 0.01mm, is provided to measure the deformation of the specimen. Tension test is conducted by gripping the test specimen between the upper and lower cross-heads.

Compression, transverse, bending, shear and hardness tests are conducted between the lower cross-head and the table. The lower cross-head can be raised or lowered rapidly by operating the screwed columns, thus facilitating ease of fixing of the test specimen.

Control Panel:
The Control Panel consists of a power pack complete with drive motor and an oil tank, control valves and electronic display unit.

Power Pack:
The power pack generates the maximum pressure of 200 kgf/cm². The hydraulic pump provides continuously non-pulsating oil flow. Hence the load application is very smooth.

Hydraulic Controls:
Hand operated wheels are used to control the flow to and from the hydraulic cylinder.

The regulation of the oil flow is infinitely variable. Incorporated in the hydraulic system is a regulating valve, which maintains a practically constant rate of piston movement.

Control by this valve allows extensometer reading to be taken.

Principle of Operation for -
UTE-TS:
Operation of machine is by hydraulic transmission of load from the test specimen through pressure transducer to a separately housed load indicator.

The system is ideal since it replaces transmission of load through levers and knife edges, which are prone to wear and damage due to shock on rupture of test pieces.

Load is applied by a hydrostatically lubricated ram.
Main cylinder pressure is transmitted to the pressure transducer housed in the control panel.

The transducer gives the signal to the electronic display unit, corresponding to the load exerted by the main ram. Simultaneously the encoder fitted on the straining unit gives the mechanical displacement to the electronic display unit. Both the signals are processed by the microcontroller and load and displacement is displayed on the touch screen simultaneously.

Computerized Touch Screen Control Panel
Series: UT 2018-TS

Micro Controller based panel incorporating state of art technology with following features -
- Front panel touch screen display
- Data entry of test parameters including pre-load, rupture %, Safe Load & Specimen data etc.
- Online graph of load Vs Displacement directly on screen.
- USB Printer port for printer interface with graph & result print out.
- Facility to export the result/Data to PDF, EXCEL & CSV formats.
- Windows based software available for Online graph on PC, Data analysis, Statistics, Point tracing, superimposing graphs to compare with standard, zooming graph etc.

Accuracy and Calibration:

### FOR TENSION TEST

- Clamping jaws for round specimens of diameter mm: 10-20, 10-25, 10-25, 10-25, 10-25, 10-25, 10-25, 10-25, 10-25, 10-25, 10-25, 10-25
- Clamping jaws for flat specimens of thickness mm: 0-10, 0-15, 0-15, 0-22, 0-22, 0-20, 0-20, 0-20, 0-20, 0-20, 0-20, 0-20
- Width mm: 50, 50, 65, 70, 70, 70, 70, 70

### FOR COMPRESSION TEST

- Pair of Compression Plates of Dia. mm: 120, 120, 120, 120, 160, 160, 160, 160

### FOR TRANSVERSE TEST

- Table with adjustable rollers
  - Diameter of Rollers mm: 30, 30, 30, 30, 50, 50, 50, 50, 50
  - Maximum clearance between supports mm: 500, 500, 500, 600, 800, 800, 800, 800
  - Radius of punch tops mm: 6, 12, 12, 16, 16, 22, 16, 22, 16, 22, 16, 22, 16, 22
